Connected Environments

Benefits

- Optimize operations
- Reduce costs
- Provide breakthrough experiences
- Control over environments: contactless interactions, social distancing, insights and alerts

Challenges

- Modeling and creating a digital representation of these environments can be difficult for even the most sophisticated business

Innovations enabling new opportunities

Cloud

Globally available, unlimited compute resources

IoT

Harnessing signals from sensors and devices, managed centrally by the cloud

Edge

Intelligence offloaded from the cloud to IoT devices

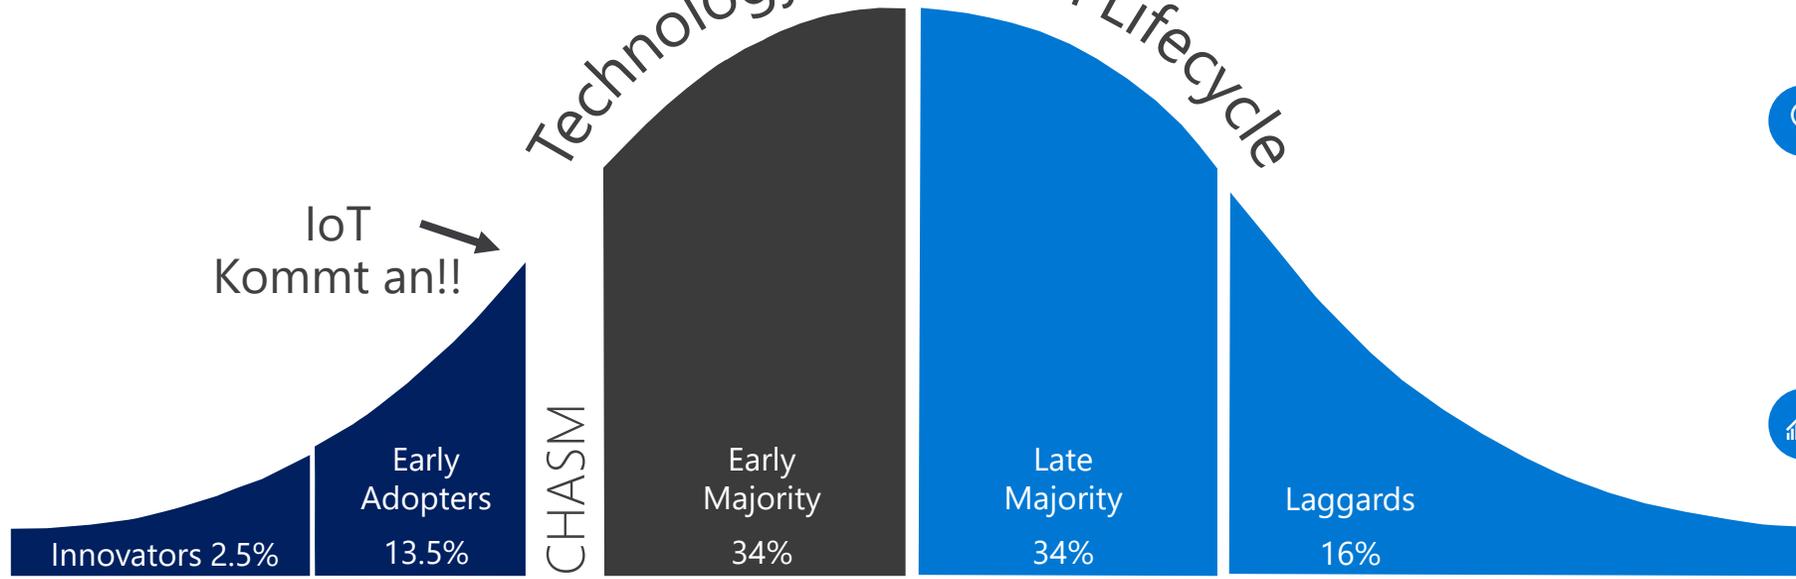

AI

Breakthrough intelligence capabilities, in the cloud and on the edge

Digital Twins

Create living replicas of any physical environment, track the past and predict the future

Microsoft's Approach to IoT & IIoT

Microsoft will invest \$5 billion in IoT. Here's why

Posted on April 4, 2018

[Julia White](#), Corporate Vice President, Microsoft Azure

Today, we are announcing that we will invest \$5 billion in the Internet of Things over the next four years. The reason we are doing this is simple: Our goal is give every customer the ability to transform their businesses, and the world at large, with connected solutions.

It's well understood that IoT solutions can create operational efficiencies, but we know the true impact extends well beyond that into our daily lives. Our customers are delivering electricity to schools in Africa, creating better patient outcomes with predictive care, improving worker safety on job sites and driver safety on Alaskan roadways.

We've been invested in IoT before the term was coined, when enterprises had these endpoints in their factories, buildings and other devices that were totally "dark." Today, we're planning to dedicate even more resources to research and innovation in IoT and what is ultimately evolving to be the new intelligent edge. With our IoT platform spanning cloud, OS and devices, we are uniquely positioned to simplify the IoT journey so any customer—regardless of size, technical expertise, budget, industry or other factors—can create trusted, connected solutions that improve business and customer experiences, as well as the daily lives of people all over the world. The investment we're announcing today will ensure we continue to meet all our customers' needs both now and in the future.

Advancing the Opportunity in IoT and Intelligent Edge

We're now seeing the kind of increased adoption and exponential growth that analysts have been forecasting for years, and we're just getting started. A.T. Kearney predicts IoT will lead to a \$1.9 trillion productivity increase and \$177 billion in reduced costs by 2020. This effect will be pervasive, from connected homes and cars to manufacturers to smart cities and utilities—and everything in between.

Product Strategy

What sets Azure apart is our unique product strategy

Open Standards and Open Source

Brownfield Connectivity

End-to-end Security

Industry Specific Compliance Certification and Validation

Common Data Models

AI consistent across cloud and edge

Seamless Integration with Industrial Analytics

The Open Manufacturing Platform

Open Source and Open Standards

(i.e. OPC UA, NOA)

No vendor lock-in

Data interoperability
